**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Donald H. Heckenberg, Jr. on 9/11/2009

In Claim 31, line 14.

"page a portion of" should be changed to: --page **and** a portion of--

**Reasons for  
Allowance**

2. Claims 25-33 are allowed.
3. The following is an examiner's statement of reasons for allowance:  
Claims 25-33 are allowable over the prior art of record because non of the prior art of record teaches or fairly suggests a first discrimination unit, a first discrimination step, or code for a first discrimination step that discriminates whether both of first and second conditions are met. More specifically, the first

discrimination features discriminate if a first condition is where the compressed image data of a N-th page and compressed image data of a specific area of an (N+1)th page is smaller than a buffer size of a buffer memory provided in an image forming apparatus. Further, the first discrimination features discriminate if a second condition is met where the compressed image data of the (N+1)th page and compressed image data of a specific area of the N-th page is smaller than the buffer size. The claims still further recite that a transmission unit, step, or code for a step, transmits data in a specific ways based, at least in part, on the results of the first discrimination unit, step, or code for a step.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

a. Mitani (US 5,737,503) discloses a print control device allows image data to be generated from intermediate data and printed by a printing unit. The print control device comprises generating means for generating image data from intermediate data memorized in an intermediate buffer, a band raster buffer for memorizing said image data generated by said generating means, a cache buffer for allowing cache of said image data generated by said generating means, and control means for reserving said intermediate buffer for memorizing said intermediate data by extending said band raster buffer to a full-raster buffer of

one page or deleting said cache buffer, when the capacity of said intermediate buffer is insufficient.

b. Iizumi et al. (US 6,891,638) discloses an image processing apparatus which is set to receive data in the RGB format cannot directly receive image data in the YMCK format although a print process is finally done in the YMCK format. In this embodiment, when RGB data is input from a host computer, renderers respectively render the R, G, and B data, the rendered R, G, and B data are converted into YMCK data by a color space converter, and the YMCK data is output to an engine. On the other hand, when YMCK data is input, renderers respectively render Y, M, C, and K image data, and directly output them to the engine.

c. Konno et al. (US 6,529,289) discloses an image processing apparatus which is set to receive data in the RGB format cannot directly receive image data in the YMCK format although a print process is finally done in the YMCK format. In this embodiment, when RGB data is input from a host computer, renderers respectively render the R, G, and B data, the rendered R, G, and B data are converted into YMCK data by a color space converter, and the YMCK data is output to an engine. On the other hand, when YMCK data is input, renderers respectively render Y, M, C, and K image data, and directly output them to the engine.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
